

TECHNICAL TRAINING

MINIMUM AND MAXIMUM INFORMATION

The minimum size we can manufacture in toughened glass must have one-dimension exceeding 250mm. If both the height and width are less than 250mm the glass cannot be toughened and will need to be made in annealed or laminated glass.

- Any unit over **1400mm** in both directions must be made in **6mm glass**. Anything more than **1300mm** in both directions should use a minimum of a **12mm cavity**.
- Any unit over **2.90m²** must be made in **6mm glass**.
- The maximum unit weight we can manufacture is **114kg** and has a maximum size limit of **3.80m²** or **2.53m²** in triple.
- Any unit over **1900mm** in both directions cannot be manufactured by Glass Systems.
- Patterned glass comes in stock sheets of **1320 x 2140mm**. The only patterned glass available above this size is **satín**. **6mm** patterned glass is only available in: Autumn, Cotswold, Everglade, Flemish, Stippolyte and Satin.
- Glass sheets are **3210mm** in width, so we cannot manufacture a unit with either dimension more than **3210mm**.

The table below is a guide to our minimum and maximum size units and the glass thickness. Please check your exact glazing size with the criteria detailed above and ensure that any legislative or legal guidance is adhered to when specifying. On larger units in 4mm, flex is possible, so 6mm should be considered if required, although again flex may be evident.
